

EuroMir® Plaskolite Mirror Acrylic Sheet

See Thru Silver

2440 x 1220mm x 3mm sheets
Custom sizes, thicknesses and colors available

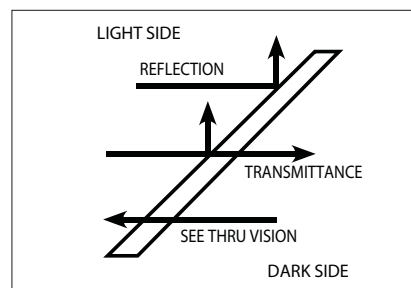

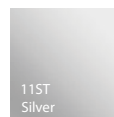

For surveillance, infinity signs, special use and theatrical applications, Plaskolite See-Thru Acrylic Mirror is an ideal choice. Also known as two-way mirror, See-Thru Mirror allows a percentage of incident light to pass through while reflecting the remainder. When illuminated, the side with the light source will be reflective and the opposite (darkened) side will be transparent.

"See-thru" or "Two-Way" mirror has a semi-transparent aluminium film deposited on the substrate that allows a percentage of incident light to pass through, while reflecting the remainder. From the illuminated side, it is a mirror. From the dark side, it becomes transparent. See Thru mirror is used successfully in monitoring/surveillance operations eg. in stores, hospitals, casinos. It is also used in advertising, point of sale displays, and for special theatrical props and effects.

*Please refer to our website colour selector tool for availability. Colours shown are a guide only, final decisions should be made directly from actual samples.

"See Thru" or "Two Way" Mirror
