

Perspex[®] Cast Acrylic Sheet Spectrum LED Block

Available in 20 & 30mm

Perspex[®] Spectrum LED Block, the latest LED optimised grade from Perspex[®], offers an alternative to traditionally constructed letters, by allowing the sign maker to router out channels and embed white or coloured LEDs either inside or on a rear plate. The result: chunky, stylish, one-piece letters with an optimised, even light transmission to maximise the environmental and economic benefits of LED technology.

Offering the same ease of fabrication as standard Perspex[®], guaranteed outdoor performance as well as its light weight, Perspex[®] Spectrum LED Block provides new aesthetic opportunities in channel letter construction and signage.
